DETAILED ACTION

Allowable Subject Matter

Claims 1-46 are allowed.

The following is an examiner's statement of reasons for allowance:

Claims 1 and 21 teach towards method and system for determining to which users, from among a plurality of users, access to a communication system is to be provided, such access being provided at any one time to a group of users that includes less than all of the plurality of users, such access being provided to the plurality of users over a plurality of channels, each of the plurality of channels being associated with one of the users and providing communication between the associated user and a common transmitting station, the method comprising the steps of: a) determining for each channel, a value representing the amount of data transmitted on the channel over a predetermined amount of time; b) receiving a value representing the highest data rate at which each channel can currently receive data; c) for each channel, determining a ratio of the received value representing the highest data rate, with respect to the value representing the amount of data transmitted; and d) transmitting over the channel associated with the highest ratio.

Claims 2 and 23 teach towards a method and system for determining to which users, from among a plurality of users, access to a communication system is to be provided, such access being provided at any one time to a group of users that includes less than all of the plurality of users, such access being provided to the plurality of users over a plurality of channels, each of the plurality of channels being associated with one

of the users and providing communication between the associated user and a common transmitting station, the method comprising the steps of: a) receiving an indication of a channel condition of a channel associated with each user; b) calculating the average channel condition of the channels for which channel conditions are received; c) for each user, determining a ratio of the most recently received indication of the channel condition with respect to the average channel condition; and d) transmitting over the channel associated with the highest ratio.

Claims 3 and 24 teach towards a system and method for determining to which users, from among a plurality of users, access to a communication system is to be provided, such access being provided at any one time to a group of users that includes less than all of the plurality of users, such access being provided to the plurality of users over a plurality of channels, each of the plurality of channels being associated with one of the users and providing communication between the associated user and a common transmitting station, the method comprising the steps of: a) receiving an indication of an instantaneous channel condition of at least one of the several channels; b) computing a filter output value for each channel for which the indication of the instantaneous channel conditions are received, the filter output value being a function of the received instantaneous channel conditions; c) calculating an access metric associated with each channel for which indications are received; and d) granting access to the communication system to the group of users associated with the best access metric.

Claims 16 and 37 teach towards a system and method for determining to which users, from among a plurality of users, access to a communication system is to be

provided, such access being provided at any one time to a group of users that includes less than all of the plurality of users, such access being provided to the plurality of users over a plurality of channels, each of the plurality of channels being associated with one of the users and providing communication between the associated user and a common transmitting station, the method comprising the steps of: a) determining an instantaneous channel condition of at least one of the several channels; b) computing an average throughput value for at least some of the channels for which the instantaneous channel conditions are determined; c) calculating an access metric associated with each channel for which the instantaneous channel conditions are determined; and d) granting access to the communication system to the group of users associated with the best access metric.

Claims 20 and 41 teach towards a system and method for granting access to a code division multiple access communication system, including the steps of: a) providing access to as many constant bit rate users and variable bit rate users as possible; b) determining a channel condition for each channel between a common transmitting station and each of a plurality of available bit rate users attempting to gain access to the communication system; c) determining a throughput value associated with each of the channels between the common transmission station and each of the plurality of available bit rate users; d) determining an access metric associated with each of the channels between the common transmission station and each of the plurality of available bit rate users; and e) if all constant bit rate users and all variable

bit rate users have been granted access, then granting access to those available bit rate users associated with the best access metrics.

Claims 1, 16, 20, 24, 37 and 41 are taught by US Pat 6,449,490, but said reference is hereby removed as prior art applicable to the instant claims by the timely filing of a Terminal Disclaimer over said reference.

Claims 4-15, 17-19, 21-23, 25-36, 38-40 and 42-46 are allowed as being dependent on allowable claims 1, 16, 20, 24, 37 and 41 above.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
